- 11,000 professional customers
- More than 1,000,000 private individual users
- Solutions used in more than 90 countries

Contact us to find out more about the iExtranet solution.

## Who are we?

For the last 10 years, Oodrive, the online storage software publisher and pioneering distributor of the SaaS (Software As A Service) model, has been developing online backup, file sharing and web-based collaborative working solutions.

With over 11,000 customers and 1,000,000 users across more than 90 countries, Oodrive currently ranks as one of Europe's leading providers for web-based file sharing.

The Cloud Storage Company

## iExtranet

Secured solution for file-sharing and collaboration

## Our commitments

### High availability

- 'Quality of service' is a major concern of Oodrive. In order to contractually guarantee an availability rate of over 99.8%, Oodrive replicates "key" elements of its technical architecture:
- Firewall redundancy and load balancing
  - Over 20 front-end application servers
  - Data access redundancy (measured in gigabytes)
  - Data backed up at 2 different data centres

### High level of security

- In order to ensure the confidentiality of exchanged data, Oodrive has maximised the degree of security at application level as well as at technical architecture level:
- Application security: triple encryption (SSL key encryption for data transfer, AES key encryption for data storage, SHA1 signature for passwords, PKI system)
  - Physical security: hosting in 2 different data centres, certified ISO 27001 in Europe, offering the highest levels of
  - security on the market
- Secure access:
- > Filtering system in place, with firewall redundancy
  - > Intrusion detection sub-system
  - > Monitoring of network and server infrastructures
  - > Hardware access security system

### System requirements

- Easy for anyone to access, simply by connecting to the Internet.
- Compatible with any type of file.
- Compatible with Windows, Mac and Linux.
- Compatible with Internet Explorer, FireFox and Safari.

# iExtranet

- Have a simple workgroup platform at the disposal of your subsidiaries, clients or services providers
- Share all types of files, whatever their size or format
- Benefit from a full tracking for all files exchanges

## Graphic customization

The iExtranet solution can be customized to your corporate style. Thereafter, it is accessible through the company website or from a dedicated URL.

The iExtranet solution lays out numerous collaborative tools which reinforce its effectiveness, without ever complexing its use. This functional richness enables the platform to meet the needs of the different organisation's services: video streaming for communication, plan viewer for architects, picture viewer for Press Relations or smartphone (iPhone, BlackBerry, Android) and iPad access for wandering collaborators.

## Functional richness

## Ease-of-use

The usability of the iExtranet platform is one of the key factors in the success of the solution. With no installation and suitable with every kind of operating system (Windows, Mac, Linux), its user friendliness and intuitive functions have strongly influenced its adoption by even the most inept of IT users.

## Security

To guarantee the file-sharing security, iExtranet integrates several encryption levels. Files are transferred through a HTTPS flow secured by a SSL 128 bits key. When backed up, files are encrypted with an AES 256 bits algorithms and a 'passphrases' chosen by the platform administrator. Passwords are also encrypted thanks to a SHA1 160 bits signature.

### Automatic notification system

This notification system can be configured at the level of each folder, allowing for users to be informed when a file has been added or updated.

### Traceability

The access list made by each contact, along with the IP addresses of the users, are tracked and archived. Each email sent is recorded, along with the actions carried out by the recipients.

### Memo and version management system

In order to limit commentary and feedback emails, users can associate a memo to a file. Moreover iExtranet enables storage of up to 10 versions of the same file.

### Search engine

A 'full-text' search engine allows to search for files by filename and also the text within documents. The search is also 'smart' as it only includes the files to which the users have access rights.

### iPDF

iPDF enables remote and dynamic management of access and action rights on PDF files shared internally or externally.

### Mobil access

Thanks to the application Oodrive Mobile, iExtranet can be accessed from a Smartphone (iPhone, BlackBerry, Android) or an iPad.

### Validation workflow

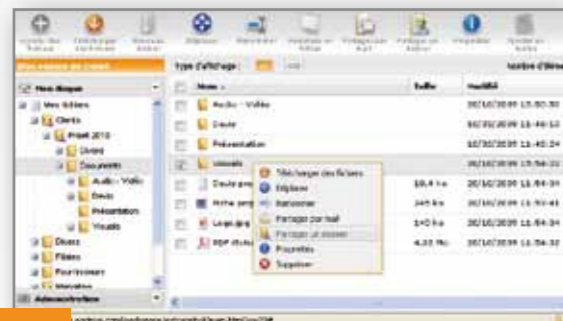

iExtranet offers the possibility to set a string validation for uploaded files in some folders, and assures you that shared documents via iExtranet have received all necessary approvals.

Additional functionalities

## Two sharing methods:

### Sharing using network

This method relates to corporate networks. You may share whole folders with external third parties, by managing each one's access and rights.

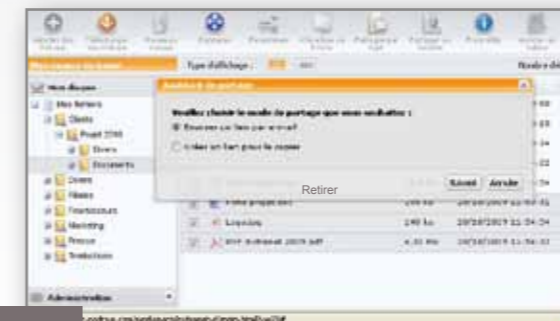

**1** Store and classify your files by creating a tree file structure.

**2** Manage action and access rights for each contact and each folder.

### Sharing using link

This method allows you to easily send large files by email whatever their size or format.

**1** Share your large files or a whole folder using a simple right-click.

**2** Your correspondents will receive an email of only a few kilobytes, containing links appearing like enclosed files.
